SUMMARY

Informatics Engineering graduate from Telkom University Purwokerto (GPA 3.72/4.00) with hands-on experience building AI-powered applications and machine learning systems in Python. Proven track record integrating into production-style pipelines for transcription, content analysis, and conversational features, alongside classical ML work spanning feature engineering, model tuning, and evaluation (Scikit-learn, XGBoost). Strong full-stack and software engineering foundation (OOP, SDLC, SQL/NoSQL) with a quality-assurance background. Seeking an AI Engineer role where I can apply LLM engineering, prompt design, and applied machine learning to build scalable, production-grade AI solutions.

EDUCATION

Informatics Engineering, Telkom University Purwokerto *2022 - 2026*

- GPA: 3.72 / 4.00
- Relevant Coursework: Object-Oriented Programming (OOP), Database Management Systems (SQL & NoSQL), Machine Learning, Web Development, Mobile App Development

EXPERIENCE

Web Developer Intern — Dinas Komunikasi dan Informatika Kabupaten Cirebon *Jan 2026 - Feb 2026*

- Developed SIMASET (Sistem Manajemen Aset) using Laravel 10 and MySQL to digitize the office asset borrowing/return process, with multi-role access for Administrator, Officer, and Employee.
- Implemented master data management, the end-to-end borrowing workflow (request, approval, return tracking), and reporting features with Excel export/import (PHPSpreadsheet) plus a statistics dashboard.

Quality Assurance Intern — PT Telekomunikasi Selular (Telkomsel) *Jul 2025 - Sep 2025*

- Performed manual testing on internal digital products, executing test cases and scenarios based on product requirements to identify bugs and usability issues before release.
- Documented findings and participated in team discussions to support product quality within the Strategic Delivery (FUT) workstream.

PROJECTS

Clipperin — AI-Powered Video Clipping Platform *Aug 2026 - Present*

- Building an AI-powered platform (Next.js 14, TypeScript, Tailwind CSS) that converts long-form videos into short-form clips optimized for TikTok, Reels, and Shorts with automatic captioning and 9:16 cropping.
- Built an automated LLM-powered processing pipeline (Inngest, FFmpeg, OpenAI Whisper for transcription, GPT-4 with prompt engineering for AI-based moment/highlight analysis) to drive auto-clipping, backed by Neon PostgreSQL (Prisma) and Cloudflare R2 with Midtrans payment integration.

Latview — AI-Based Career Platform *Apr 2026 - Present*

- Building an AI-based career platform (Next.js 16, React 19, TypeScript) to help users practice mock interviews and skill assessments, with a Supabase (PostgreSQL, Auth, Storage) backend using RLS policies and idempotent migrations.
- Integrated Google Gemini AI as the primary LLM with an OpenAI fallback for interview-question generation and skill assessment and implemented a service-layer architecture with Zod-validated API routes following a Server Components-first approach.

MetaPrediction: Dota 2 Hero Meta Prediction — Final Project *Jan 2026 - Jul 2026*

- Built a machine learning system to predict which Dota 2 heroes will become meta in the next patch, using an expanding-window supervised learning approach (patch t features to predict patch t+1 meta status) across patches 7.33-7.40.
- Built the full pipeline (preprocessing, feature engineering, SMOTE/ADASYN, feature selection, Logistic Regression, Random Forest, XGBoost with GridSearchCV) and evaluated results using accuracy, F1-score, ROC-AUC, and SHAP feature importance.

Inventory Store Desktop Application *Feb 2024 - Jun 2024*

- Designed and developed a desktop inventory application using Java (NetBeans), collaborating with team members on UI design and database integration. Achieved a final grade of A.

Letsgomas Website *Sep 2024 - Jan 2025*

- Created the project roadmap and managed a cross-functional team (developers, UI/UX, QA), and produced software documentation such as DUPL, SKPL, DPPL, and user manuals. Achieved a final grade of A.

SKILLS

Soft Skills: Communication, Teamwork, Eagerness to Learn, Time Management

Hard Skills: HTML, CSS, Python, JavaScript, TypeScript, PHP, Laravel, Next.js, React, MySQL, Supabase (PostgreSQL), Machine Learning (Scikit-learn, XGBoost), Prompt Engineering, Manual Testing, Test Case Design

Software Skills: Visual Studio Code, Postman, Figma, Trello, Google Workspace
